Conclusions and Analysis: Indirect Measurement Project

1. Compile all of the data for all of the Research and Experimentation Classes in 9th grade.

2. Carefully construct a box plot of that data.

3. Label the values at the quartiles.

4. Write a paragraph that discusses the results. What kinds of trends did you see in the data? Are there outliers, and what are they?

5. Discuss your group’s successes or challenges. Suggest some ideas of how your project could have been more accurate and easy to use.

Be sure to write in complete sentences and organize those sentences into coherent paragraphs. Your assignment should include your name, date, period and block. You should also list the names of the others in your group. Your document must be 12point, Times New Roman, 1 inch margins, 1.5 spacing and contain at least 1 full page of text.
