Tower Project Summary

Write a one page (no more than 1 page), word-processed summary of the tower project, including how you built your tower, whether it worked, how you measured your tower, whether that worked and discuss how accurate your measurements were in comparison to the rest of the class.

Discuss the relative accuracy of the different indirect measurement techniques. Be sure to use some quantitative measurement to justify your judgments. Be sure to discuss your individual table data and the overall class data.

Finally, be sure to discuss any possible sources of error in the different measurement techniques.
